

# Vanguard's \$1,000 Question

Analyzing U.S. Households' Liquid Assets

Dan Valenzuela

# Business Background

# Method

**Overall Goal: Target households with >\$1,000 in assets**

1. Collect data on household finances
2. Construct and retrieve relevant household features
3. Classification model to target households and understand features

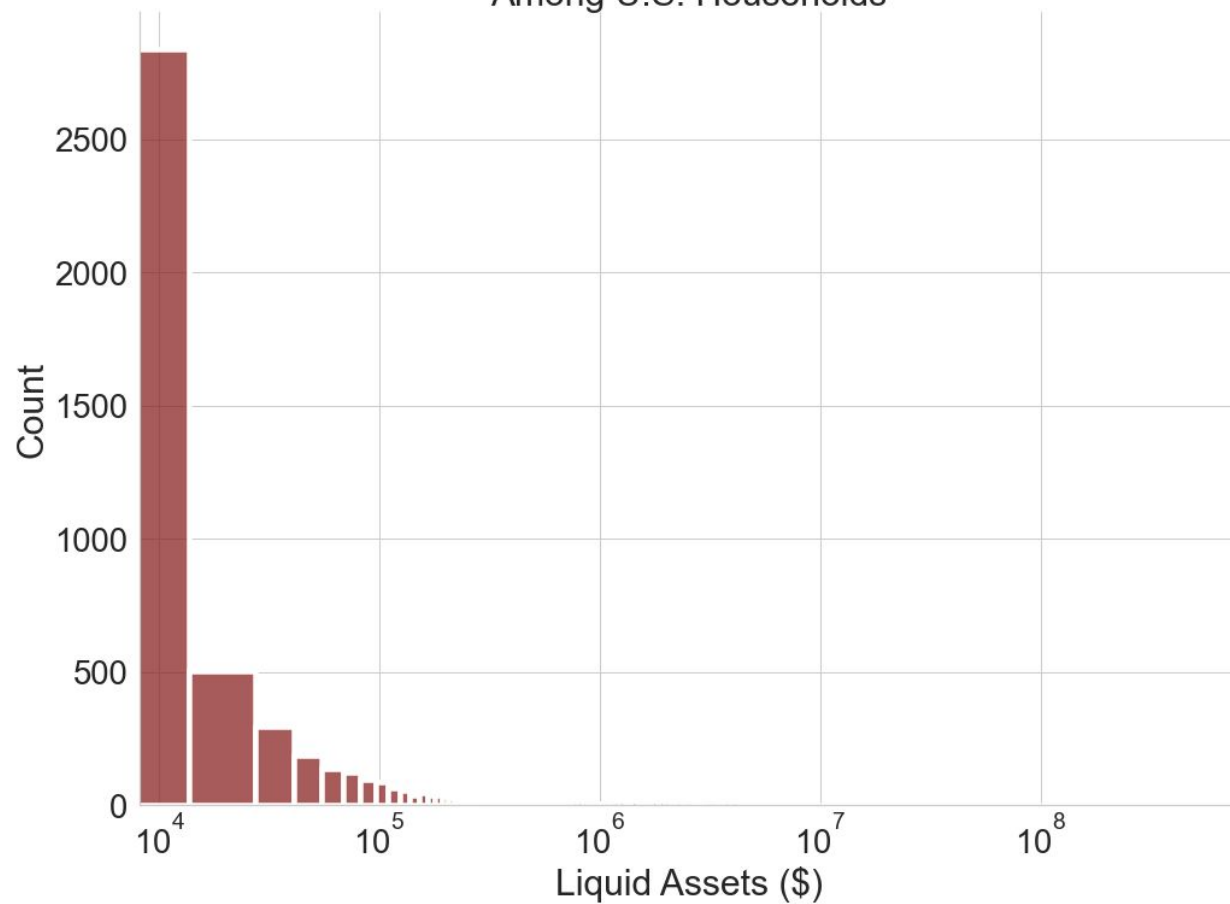

# Data - Potential Customers

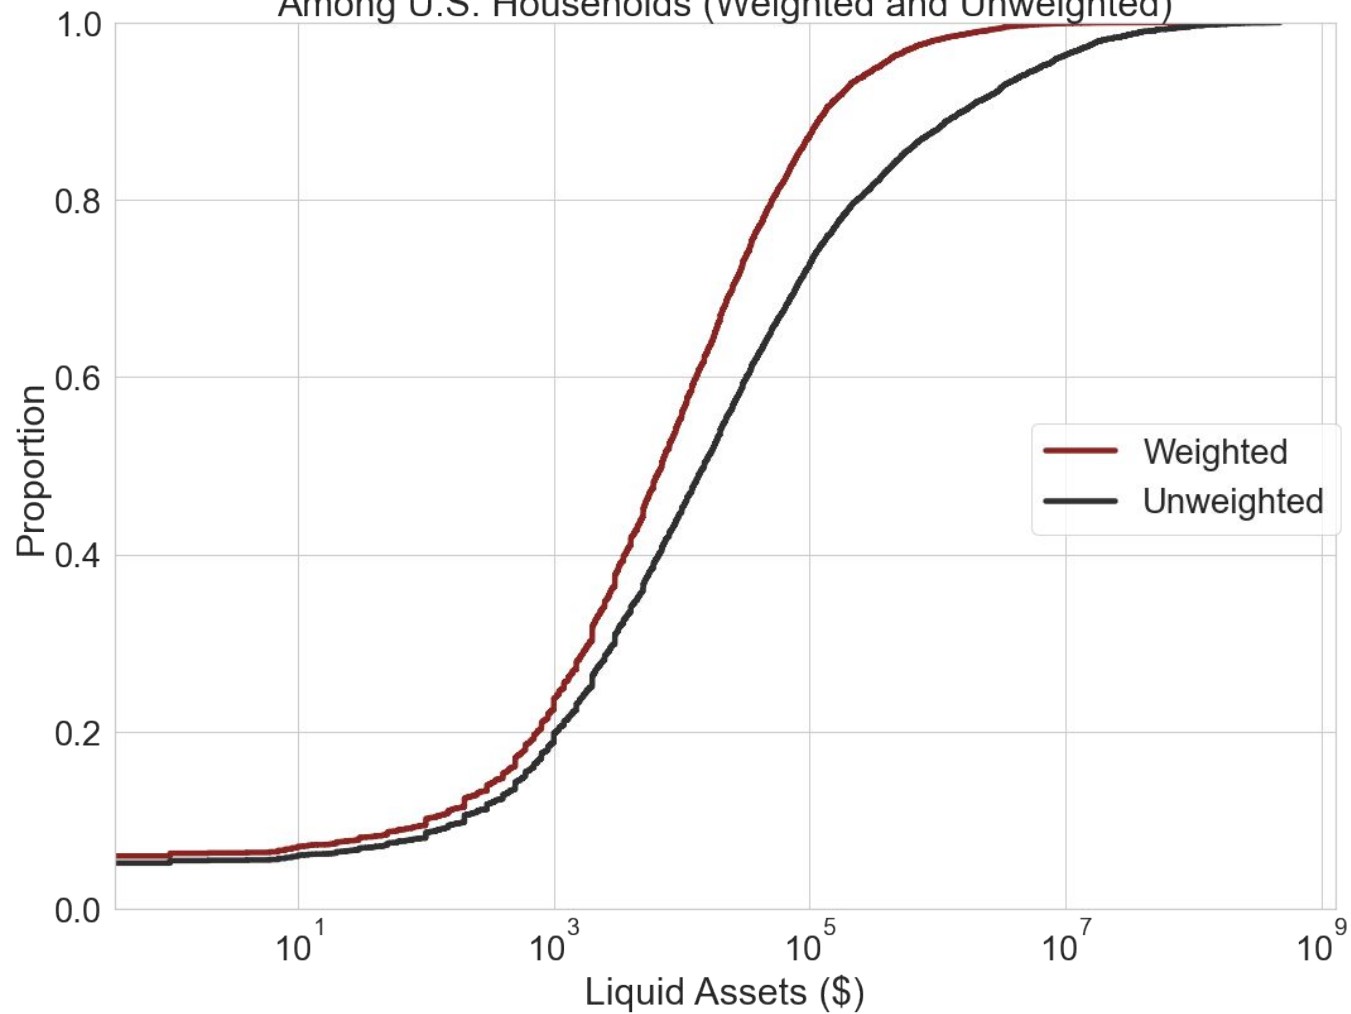

# Data Hurdles

1. Skewed distribution of wealth
2. Overrepresentation of wealthy households

Distribution of Liquid Assets  
Among U.S. Households

Cumulative Distribution of Liquid Assets  
Among U.S. Households (Weighted and Unweighted)

# Modeling

## Overcoming Hurdles

- Sample weights
- Scaling

## Evaluating final model

- Optimizing F1 Score: decreasing both false positives and false negatives
- .916 compared to .baseline of 907

# Modeling

# Conclusions & Next Steps

## Conclusions

- Credit reports and banking integration will yield useful information

## Next Steps

- Improve feature engineering from abundance of data
- Consider removing outliers
